Speaker Walk Around Self Test Instructions

Below are the instructions on performing an audio/speaker self test in the vehicle, this is done by accessing the diagnostic menu.

How to run the audio speaker self test:

Start the vehicle and turn on the radio, any FM station will be fine. Exit CarPlay if connected and tune in to an actual radio station for this test.

Simultaneously press and hold the **right seek / next track button** on the steering wheel and the **right seek / next track button** on the dashboard/HVAC panel for around 5 seconds.

The test will activate and a sound/tone will play through each of the speakers, with the speaker it's testing on the display. If a specific speaker doesn't make a sound when the name is displayed on the screen, you have found your problem. Please be aware some of the tones may be loud or really high pitched.

You can exit the test or re-run the test in the diagnostic menu options if needed.
