Included is your 2025 map update (released in 2026) for your Ford/Lincoln vehicle. Please follow the directions below to update your vehicles infotainment system. This process will downgrade your system first to allow the upgrade tool to function (Ford patched this method of updating in your version of Sync 3.4). After the update is complete you may keep the flash drive as it is as a back up or erase it and use it for something else.

UNIVERSAL BASIC INSTRUCTIONS (SYNC 3.4 SOFTWARE AND/OR MAPS UPDATE)

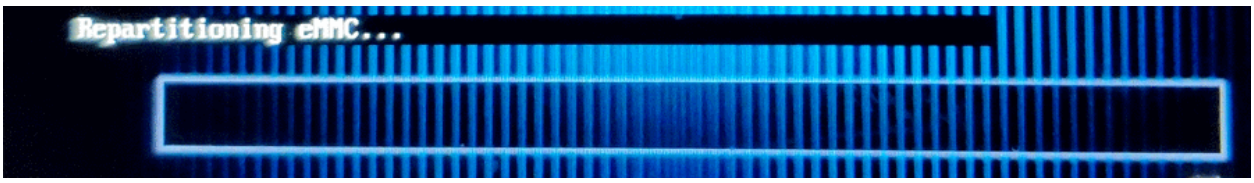

1. Remove USB flash drive from packaging, start your vehicle and keep your car running through the entirety of the update. Insert the USB drive into your vehicle and you should start seeing the following message

2. Once you see the following message, do not remove the USB drive, it will restart automatically in a few moments. If the system needs to downgrade first, it will stay on this screen for a while then will restart. Don't be alarmed, it will have an older version (out dated theme) for a moment before it starts to upgrade again. **If you have an 8.46" display your screen may stay black for a while as the older version of Sync isn't compatible with the display. Just leave it be until it restarts again and your picture will return.** This process may take up to 50 minutes total to complete.

3. Once the infotainment system has been downgraded you will notice the theme has changed, this is normal. It will then start the upgrade process and will change screens entirely.

Non-navigation updates will take about 10-12 minutes while navigation updates will take about 25 minutes.

4. When it's finished the screen will turn green and you can remove the USB hub from the vehicle. The system should now automatically restart.

5. If necessary (2016 vehicles), replace your USB hub with the proper updated version or else you'll get constant error messages saying that your USB hub isn't compatible.

Thank you again for your purchase!
